NPIC/R-5063/64

This report supplements NPIC/R-78/64 and R-238/64, 1/ 2/ which discuss the Ostrog MRBM Complex, previously consisting of two Type I launch areas and a fixed field site.

Ostrog MRBM Launch Areas No 1 and 2 were first observed in [REDACTED] and were considered to be complete. They are located approximately 10 nautical miles (nm) west of the two field sites and connected to them by road. Fixed Field Site No 1 was identified in [REDACTED] and was considered to be complete. It is located 4.1 nm north-northwest of Fixed Field Site No 2 (Figure 1).

Fixed Field Site No 2 is located in a wooded area 3.5 nm west-northwest of Shepetovka. It was not present on photography of [REDACTED] and was identified in [REDACTED]. The site (Figure 2) consists of four padlike clearings interconnected by a road system. The western pair of clearings are approximately 370 feet

apart, while the eastern pair are approximately 430 feet apart. The azimuths of the clearings are approximately 225 degrees, compared with [REDACTED] and 240 for Launch Areas No 1 and 2, respectively, and 185 degrees for Fixed Field Site No 1. No activity is discernible on the clearings; however, approximately 24 possible tents are located approximately 800 feet northeast of the easternmost clearing. The site has appeared unchanged on a subsequent KEYHOLE mission in [REDACTED].

There are four rail-to-road transfer points in the vicinity, any one of which could be used by the soft sites or fixed field sites. Roads connect these transfer points with all the sites. The two rail-to-road transfer points nearest field site No 2 are the railyards 3.3 nm east-southeast in Shepetovka, and the rail siding 2.6 nm north at the Shepetovka Ammunition Depot.
